

Name:

BREAD

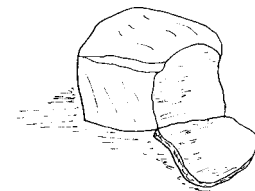

Not so long ago people baked their own bread at home. The mother usually kneaded the dough and baked it in a wood fire heated oven. After a while small bakeries started baking the bread. Lots of families bought their bread at the local bakery. Then large companies started baking bread for whole towns and cities. Hardly anyone baked bread at home.

Then the bread machine was invented. Some families have a bread machine at home that bakes the bread for them. Maybe you have a bread machine at home? Maybe you have even placed the ingredients in the bread tin and turned the machine on.

Bread machines are very popular in rural areas. A lot of people living on farms or in isolated areas now have a bread machine so they can have fresh bread every day. Before, they had to buy lots of bread when they went shopping and freeze them in a large freezer. They didn't really have fresh, crispy bread, hot out of the oven. Isn't technology great?

Write what you would need to bake a loaf of bread.

Draw a bread machine below.

Design and build a model bread machine using recycled materials.
