

Name:

BRIDGES

Below are three names of famous bridges. Bridges are build by engineers who use the latest technology to make sure the bridge is strong and will last a long time. It costs millions to build a big, strong bridge. In the older days bridges were built very strong too but they didn't have the machines to help them like these days. They relied on men to build the bridge. Now machines do a lot of the work.

Write 2 machines that people use to help them build a bridge.

--	--

Locate the following bridges. Where are they? What do they look like? Use an encyclopaedia or dictionary to help you.

Find pictures in old magazines of the bridges if you can. Cut them out and glue them on another piece of paper. Write the name of the bridge underneath and some facts about the bridge.

Brooklyn Bridge

Golden Gate Bridge

Sydney Harbour Bridge

Draw a picture of Sydney Harbour Bridge.
