

Name: _____

Are you being framed?

Take a look at the picture frame? What is wrong?

To see anything needs more than just your eyes. You need your brain to work together with your eyes. You also need light. If you looked at this picture in the dark you wouldn't see it. So, you need your eyes, brain and light to work together to solve what is wrong with the picture frame. To put it simply, it is an optical illusion. Did you spot it?

Describe what an optical illusion is. _____

Draw an 'optical illusion' picture frame on the back of your worksheet.
