

Name: _____

On the right is a national phone number. To what Australian emergency centre does the number belong?

A poison is something which is harmful to your body. Sometimes poisons are taken by accident. Poisons can be taken by mouth or you could breathe it in. It can also enter through your skin or in some instances is forced into your blood stream with the use of a needle.

Finish the words in the table.

When a poison is taken by mouth it is called?	<i>Ingest</i>
When a poison is breathed in it is called?	<i>Inha</i>
When a poison enters through the skin it is called?	<i>Abso</i>
When a poison is forced into the blood stream it is called?	<i>Injec</i>

If someone has swallowed a poison which burns their tracts (throat etc.) on the way to the stomach you should never make them vomit because the stuff they swallowed will burn them again on the way up.

Unscramble the corrosive and petroleum based poisons below.

<i>Corrosive poisons</i>	<i>Petroleum Based poisons</i>
idac	trolpe
stantecinfdis	rosekene

☆ What kind of symptoms could you expect to see if someone swallowed a burning poison like one in the table above?

On a separate piece of paper, draw a person who has just swallowed a burning poison. Draw with expression.
