

Name: _____

Square Up

There was once a farmer who owned a perfectly square, piece of land next to the queen's palace. One day he happened to rescue the queen from some bad robbers. The queen was very thankful and told him he could double his land but it must stay perfectly square or he could not have it.

The farmer was very happy of course, until he realized a small problem. If he doubled his square piece of land, his land became rectangle.

Can you help the farmer solve his problem?

Cut out the two squares below and make one large square from the two smaller squares.
