

Name: _____

Robots

A robot is a machine that has been programmed by a person.
Some robots can hold things, put screws in other machines, weld things and check that things work.

Write what you think the following robots do.

Robot space probe: _____

Bomb-disposal robot: _____

Draw a robot.

I'm sure your robot will look much better than the one on the worksheet.

People use technology to build robots. Could you build a robot? Try making a robot from recycled material. You can use cardboard boxes, toilet rolls, al-foil, bits of wire, string and much more.

When its finished, tell your class what it can do.
