

Name: _____

Mapping

Below is an example sketch of a street map. Your task is to draw as accurately as you can, a sketch of how you get to school. Start at your home and try to remember every street you go through and in which direction it runs. Mark as many landmarks as possible, e.g. playground, hospital, park, shops or the home of a friend.

Use the back of this worksheet to draw your map. You can use colours or make a key (symbols) to indicate certain buildings or areas. Imagine a total stranger is to find his or her way to your school from your home so you must make it as accurately as you can with as many recognizable landmarks as possible. Can you draw a map in relation to a compass? Remember the top of your page is always north. Have fun!
