

Name _____

Major Outdoor Air Pollutants

Air pollution is the presence of certain chemicals in the atmosphere that are present in high enough concentrations to affect the climate and become harmful to organisms and materials.

Some of the most major air pollutants in our atmosphere today are carbon monoxide, nitrogen dioxide, sulphur dioxide, lead, ozone and suspended particulate matter (SPM).

Find the following words in the word search:

**atmosphere, carbon monoxide, nitrogen dioxide, sulphur dioxide, lead, ozone,
air pollution, smog, environmental effects, health, danger**
