

Name_____

Revegetation

Revegetation is the process of re-establishing native plants back into their natural environment. Revegetation usually is done after an area as been disturbed e.g. after mining the area is re-planted. A lot of site preparation needs to be done before re-planting the native plants back into their local community, such as weed removal, water requirements, soil preparation and plant species needed.

Explain why the 4 site preparation tasks need to be considered before re-planting takes place.

Weed Removal:

Water Requirements:

Soil Preparation:

Plant species needed:

Identify a disturbed area that needs revegetating. Draw 4 native plants that would be suitable for the area and name them by their common name.
